

## Abstract

The present invention provides a disazo compound of the formula ( I ) or a salt thereof

5

wherein A represents 4-sulfophenyl or 6,8-disulfo-2-naphtyl, one of R<sup>1</sup> and R<sup>2</sup> represents hydrogen and the other represents methyl

The present invention also provides a dye-based polarizing film comprising a base material and the disazo compound of the formula ( I ) or the salt thereof contained in the base material.

10

The disazo compound of the present invention provides a polarizing film, which is excellent in light resistance and initial polarizing performance, particularly light resistance when used as a polarizing element.
